4. Allow the scale to adjust to the weight of the object for a few seconds before it displays the final measured reading on the LCD screen.

**NOTE:** To turn off the scale, press and hold the power button. Otherwise, the scale will automatically shut off after 2 minutes of inactivity.
Volume Measurement
(Milk Volume | Water Volume)

The tare function allows the user to deduct the weight of a container from the total weight in order to determine the net weight of the contents excluding the weight of the container which holds them.

**NOTE:** Keep the scale’s maximum weight capacity in consideration (11 lb / 5kg) when operating the tare function.

1. Power on the scale and wait for the LCD screen to display ‘0’.

2. Place an empty container on the scale platform. The screen will display the container weight.

3. Press the ‘ZERO’ button to tare the weight of the container.

4. Once the screen displays ‘0’ place the contents to be weighed in the container. The measurement results will automatically be displayed on the LCD screen.

5. To reset, remove the contents from the platform and press the ‘ZERO’ button.
**NOTE:** The scale will automatically use the zero function when the total weight applied on the scale is < 7 oz (200g), and will use tare when the total weight applied on the scale is > 7 oz (200g).

**Unit Conversion**

To change the unit of measurement, press the ‘UNIT’ button (located beneath the scale) until the LCD display indicates the desired unit of measurement.

**Automatic Power Off**
